

- Basic Repository implementation

The screenshot shows an IDE with the Package Explorer on the left and the code editor on the right. The Package Explorer shows the project structure for 'client [boot]' under 'src/main/java'. The code editor shows the code for 'ClientRepository.java'.

```
1 package com.restcrudbasics.client.repositories;
2
3 import org.springframework.data.jpa.repository.JpaRepository;
4 import org.springframework.stereotype.Repository;
5
6 import com.restcrudbasics.client.entities.Client;
7
8 @Repository //this annotation will register the class ClientRepository as a dependency injection component and will be management by spring
9 public interface ClientRepository extends JpaRepository<Client, Long> { /* Put the entity name and the primary key or Id type, in this case, Long */
10 }
11
12 }
```
